1. This Office Action is in response to Applicant's Amendment dated November 13, 2008 in response to USPTO Office Action dated August 13, 2008.

The cancellation of claims 3, 5, 23, 24, 28 and 29; the amendments to claims 1, 20, 25, 26, 30, 31 and 33-35 and the merit of Applicant's remarks relative to claims 31 and 35 are sufficient to place the application in a condition for allowance as set forth herein below.

Allowable Subject Matter

2. Claims 1-2, 4, 6-22, 25, 27 and 30-35 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Relative to claim 1, the major difference between the teachings of the prior art of record (Pub. No. US 2004/0178974, Miller et al.; USP 6,414,661, Shen et al. and USP, 7,176,861, Dedene et al.) and that of the instant invention is that said prior art does not teach a method of optimizing lifetime of a display, the method comprising: determining whether to control at least a portion of a display based on a lifetime metric; identifying a plurality of display control options by using a usage model in response to determining to control the at least a portion of the display; and selecting at least one of the display control options to control the display; wherein determining whether to control the display based on a lifetime metric comprises: a) comparing the lifetime metric to a threshold; and b) determining to perform the

Art Unit: 2629

step of identifying a plurality of display control options in response to the lifetime metric exceeding the threshold.

Regarding claim 20, the major difference between the teachings of the said prior art of record and that of the instant invention is that said prior art does not teach a method comprising: determining a lifetime metric for at least a portion of a display being used using a lifetime model; determining whether to control the at least a portion of the display based on the lifetime metric; identifying at least one display control option using a usage model in response to determining to control the at least a portion of the display, profiling use of at least one of the display and one or more displays similar to the display to establish the usage model, wherein profiling comprises profiling use by a current user of the display.

Relative to claim 26, the major difference between the teachings of the said prior art of record and that of the instant invention is that said prior art does not teach an apparatus comprising: means for displaying information, the means for displaying is being used to display information; means for determining a lifetime metric associated with at least a portion of the means for displaying; means for determining whether to control the at least a portion of the means for displaying based on the lifetime metric; means for identifying a plurality of display control options operable to increase a remaining life of at least a portion of the display in response to determining to control the at least a portion of the means for displaying; usage model means for estimating usage of the means for displaying; means for evaluating the plurality of display control options using the usage model means; and means for selecting at least one of the plurality of display control options based on the evaluation.

Regarding claim 31, the major difference between the teachings of the said prior art of record and that of the instant invention is that said prior art does not teach computer software embedded on a tangible computer readable storage device, computer software comprising instructions of: determining whether to control at least a portion of a display being used based

Art Unit: 2629

on a lifetime metric, wherein determining whether to control at least a portion of a display includes determining to control the at least a portion of the display in response to a lifetime metric exceeding a threshold; identifying a plurality of display control options in response to determining to control the at least a portion of the display; and selecting at least one of the plurality of display control options to control the display wherein the selection includes identifying a user acceptance setting on implementing any one of the plurality of display control options.

Relative to claim 35, the major difference between the teachings of the said prior art of record and that of the instant invention is that said prior art does not teach a computer system comprising: a display in use and operable to display a visual representation of information on the display; a processor operable to determine a plurality of display control options for increasing the remaining life of the display, each control option including parameters varying the visual representation of information on the display, wherein the processor is further operable to: determine to control the display in response to a lifetime metric exceeding a threshold; identify the plurality of display control options in response to the determination to control the display; and select at least one of the plurality of display control options to control the display, wherein the selection includes identifying a user acceptance setting on implementing any one of the plurality of display control options; and a display controller operable to receive parameters for the selected at least one of the control options processor to control the visual representation of information on the display.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

Art Unit: 2629

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
